

AMENDMENTS TO THE CLAIMS:

This listing of claims will replace all prior versions, and listings, of claims in the application:

LISTING OF CLAIMS:

Claim 1 (Original): A camera system, comprising:
a camera for photographing an object and acquiring image data of the object;
a computer connectable to said camera;
a manipulation member provided to said camera;
a camera controller provided to said camera for detecting an operation of said manipulation member and transmitting a signal based on the detected results to said computer; and
a controller provided in said computer for controlling a screen of a display functioning together with said computer based on the signal received from said camera.

Claim 2 (Original): The camera system according to claim 1, wherein the operation of said manipulation member is to specify a folder for transferring image data acquired by said camera to said computer.

Claim 3 (Original): The camera system according to claim 2, wherein said computer displays a warning screen on said display and transmits warning information to said camera when a capacity of the specified folder is not enough.

Claim 4 (Original): The camera system according to claim 3, wherein said camera is provided with an image display and displays a warning screen thereon based on the warning information, the warning screen being different from that on said display.

Claim 5 (Original): A computer program product based on which a computer, which is connectable to a camera for photographing an object and acquiring image data of the object, executes the steps of:

receive a signal transmitted by the camera connected to the computer; and
display a folder for storing image data transmitted from the camera on a display functioning together with the computer, based on the signal.

Claim 6 (Original): The computer program product according to claim 5, wherein warning data is transmitted to the camera when a capacity of the folder is not enough.

As Amended

Claim 7 (Currently amended): A camera system, comprising:
a camera for photographing an object and acquiring image data of the object;
a computer connectable to said camera;
an image display provided to said camera;
a controller provided to said computer for detecting a connection of said camera to said computer and transmitting [[a]] display data stored in said computer to said camera based on the detected results; and
a camera controller provided to said camera for controlling a screen of said image display based on the display data received from said computer.

Claim 8 (Currently amended): The camera system according to claim 7, wherein said image display displays by thinning out the display data based on the difference between the number of pixels of said image display and those of ~~said a~~ display functioning together with said computer.

Claim 9 (Original): The camera system according to claim 8, wherein said displayed data includes mouse cursor display data, and wherein the mouse cursor display data are displayed on said image display without being thinned out.

Claim 10 (Original): The camera system according to claim 8, wherein said camera includes a manipulation member for instructing a change of display magnification rates of said image display, and wherein said camera controller changes the display magnification rate by changing a thinning out rate of the display data in response to an operation of said manipulation member.

Claim 11 (Original): The camera system according to claim 10, wherein said camera controller displays a frame showing a display range to be changed on said image display.

 Claim 12 (Original): The camera system according to claim 7, wherein the display data include warning data.

Claim 13 (Original): The camera system according to claim 12, wherein said camera is able to transmit the image data to a folder specified in said computer, and wherein the warning data are data showing a lack of a capacity of the folder.

Claim 14 (Currently amended): The camera system according to claim 12, wherein said image display displays a warning screen based on the warning data, the warning screen being different from a warning screen displayed on ~~the~~ a display functioning together with said computer.

Claim 15 (Currently amended): A camera, comprising:
an a connector connectable to a computer;
a an image display; and
a camera controller which receives display data from the computer connected to said connector and controls a screen of said image display based on the received display data.

Claim 16 (Original): The camera according to claim 15, wherein said image display displays by thinning out the display data.

Claim 17 (Original): The camera according to claim 16, wherein said image data include mouse cursor display data, and wherein the mouse cursor display data are displayed on said image display without being thinned out.

Claim 18 (Original): The camera according to claim 16, further comprising a manipulation member for instructing a change of display magnification rates of said image display, wherein said camera controller changes the display magnification rate by changing a thinning out rate of the display data in response to an operation of said manipulation member.

AA
Cond
Claim 19 (Original): The camera according to claim 18, wherein said camera controller displays a frame showing a display range to be changed on said image display.

Claim 20 (Currently amended): A camera system, comprising:
a camera for photographing an object and acquiring image data of the object;
a computer connectable to said camera, said computer including a manipulation device for activating an operation performed by the computer;
a memory provided in said camera, said memory registering an operation for said computer ~~connected to said camera~~ corresponding to the operation activated by said manipulation device; and
a manipulation member which calls a registered content from said memory and specifies the operation based on the registered content to activate the corresponding operation when said manipulation member is operated.

Claim 21 (Currently amended): ~~The~~ A camera system ~~according to claim 20,~~
comprising:

a camera for photographing an object and acquiring image data of the object;
a computer connectable to said camera;
a memory provided in said camera, said memory registering an the operation which
includes a transfer of the image data to said computer and display of dialog pertaining to
the transfer on a display of the camera and a display functioning together with the
computer; and
a manipulation member which calls a registered content from said memory and
specifies the operation based on the registered content when said manipulation member is
operated.

Claim 22 (Currently amended): ~~The~~ A camera system ~~according to claim 20,~~
comprising:

 a camera for photographing an object and acquiring image data of the object;
a computer connectable to said camera;
a memory provided in said camera, said memory registering an the operation is to
specify a folder for transferring the image data to said computer; and
a manipulation member which calls a registered content from said memory and
specifies the operation based on the registered content when said manipulation member is
operated.

Claim 23 (Currently amended): A camera, comprising:
a connector connectable to a computer, said computer operable by way of a
manipulation device;
a memory for registering an operation for the computer corresponding to an
operation activated by said manipulation device connected to said camera; and
a manipulation member which calls a registered content from said memory and
specifies the operation based on the registered content to activate the corresponding
operation when said manipulation member is operated.

Claim 24 (Currently amended): ~~The~~ A camera ~~according to claim 23,~~ comprising:

a connector connectable to a computer;

a memory for registering an operation for the computer, the operation includes a
including transfer of the image data to the computer and synchronous display of dialog on a
display of the camera and a display functioning together with the computer; and

a manipulation member which calls a registered content from said memory and
specifies the operation based on the registered content when said manipulation member is
operated when the connector connects the camera to the computer.

Claim 25 (Currently amended): ~~The A camera system according to claim 23,~~
comprising:

a connector connectable to a computer;

a memory for registering an operation for the computer;

a memory for registering an the operation is to specify a folder for transferring the
image data to the computer; and

a manipulation member which calls a registered content from said memory and
specifies the operation based on the registered content when said manipulation member is
operated.

Claim 26 (New): The camera system of claim 20, wherein said registered operation
for said computer includes at least one of turning off the power source of the computer,
executing an application of the computer, and displaying image data in the computer.

Claim 27 (New): The camera system of claim 21, wherein said registered operation
for said computer includes transfer of the image data to the computer immediately after
photographing.

Claim 28 (New): The camera of claim 23, wherein said registered operation for said
computer includes at least one of turning off the power source of the computer, executing an
application of the computer, and displaying image data in the computer.

*As
cancel* Claim 29 (New): The camera of claim 24, wherein said registered operation for said computer includes transfer of the image data to the computer immediately after photographing.
